DESIGN DIRECTION C

Your terrace, alive on screen.

The app opens on a drawing of the user's own terrace — their pots, their plants, seen from above. Everything else hangs off that picture.

1. **Plants, not tasks.** Work appears on the plant that needs it — a water-drop pin on the tomato — before it appears in a list.
2. **Drawn, not iconified.** Every species has a botanical illustration, top view and side view. No icon-in-a-circle anywhere.
3. **Honest time.** A plant's life is shown only through sourced milestones — sown, transplant, harvest window — never invented stages.
4. **Quiet surfaces.** Limestone ground, hairlines, one card style. Colour is reserved for plants, pots and the one thing to do now.

PALETTE — TAKEN FROM A TERRACE

Limestone #F2F0EA	Neem ink #17301F	Terracotta #C2592B
Leaf #2F6B33	Haldi #E3A21A	Water #2E6FB0

TYPE

Tomato

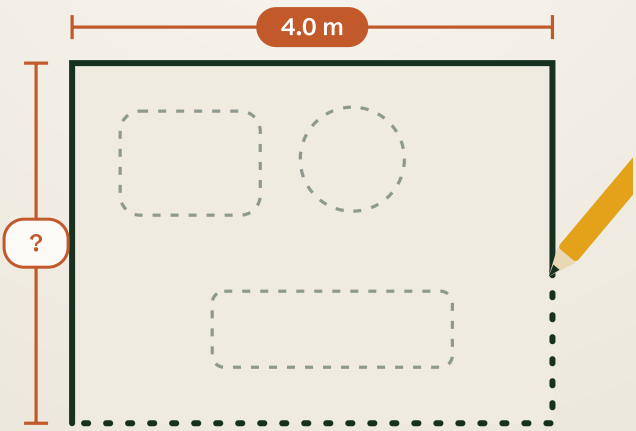

Young Serif — plant names, like herbarium labels

Check the soil 2-3 cm down

Schibsted Grotesk — everything else

Motion: pins breathe slowly; a completed check makes the plant lift and the pin drop into the soil. Respects reduced motion.

TERRACE GARDEN

Let's draw your terrace

Measure the floor once. We'll suggest plants that fit your pots, your sun and your city's season — and remind you to check the soil.

1 Measure 2 Add pots 3 Plant

Start with my terrace

Look at plants first

Sunday 18 October · Delhi

3 plants would like a soil check

Early morning is the best time to water.

SOIL CHECK · GROW BAG A

Tomato

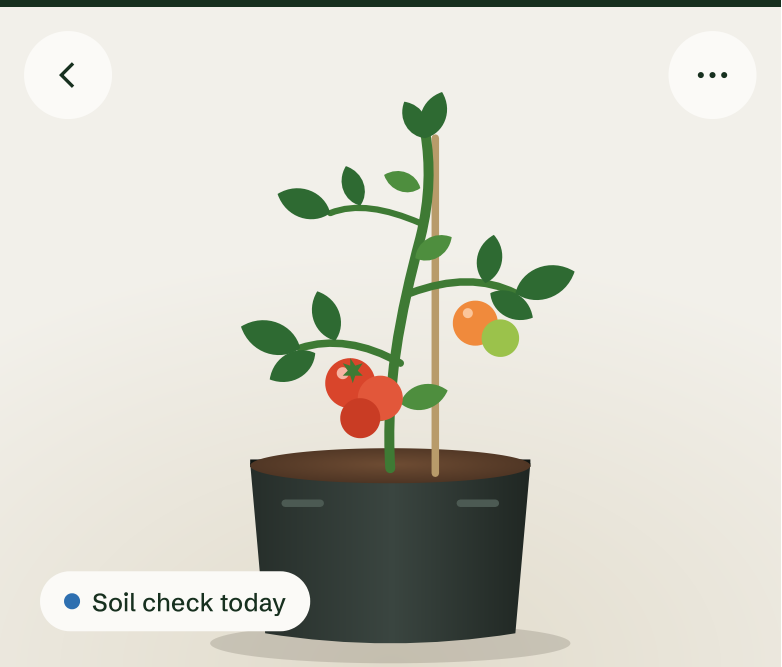

Push a finger 2-3 cm into the soil, away from the stem. **Water only if it feels dry** — slowly, until water drains from the bottom.

It was dry — I watered

Still moist — skip today

Morning is the best time to water · Royal Horticultural Society

Tomato

Tamatar · *Solanum lycopersicum* · Grow bag A

Day 30 sown 18 Sep

Sown	Transplanted	Harvest may start
18 Sep	13–18 Oct	17 Dec – 26 Jan

Nursery 25–30 days (ICAR) · 90–130 days to harvest (Texas A&M). Varieties differ.

Care rhythm

Edit

Soil check	Pest check	Feed

Sow this month

Matched to your 6+ hours of sun, your four containers and North India's calendar.

Sow now | Next month | Saved

BEST MATCH

Palak

spinach · leafy green

✓ Sow Sep–Nov
✓ Fits all 4 containers
✓ Fine with some shade

Radish

Ready in 40–45 days

Fits all containers

Brinjal

Sow in October

Fits grow bag A

Carrot

Ready in 75–80 days

Needs a deep pot

Lettuce

Sow Sep–Oct

Likes some shade

Tomato opens in November — **remind me**

C · Add a plant choose the pot on your terrace

ADD BRINJAL

Which container?

Brinjal needs at least 19 L and 30 cm of soil.

Grow bag E

54 L · 30 cm deep

Plants − 1 +

Starting from Seed | Seedling

One brinjal per 19 L of soil — bag E has room for one, and keeps it apart from your tomato. Texas A&M AgriLife

Bag E is new? It was added from **Edit layout** — you can move it any time.

Plant brinjal in grow bag E
